 Portfolio

 Hana Rtibi

PROFILE

A computer science graduate with a passion for software development and innovative technologies. I am currently working on a smart recruitment platform built using Java, Spring Boot, and generative AI, with a particular interest in cloud computing and DevOps.

ACADEMIC BACKGROUND

National Engineering School of Carthage (Charguia2)	2023–2026
• National Engineering Degree in Computer Engineering	
Bizerte Preparatory Institute for Engineering Studies, Physics and Chemistry (Bizerte)	2021–2023
• Pre-Engineering Diploma - Rank: 202	
Foussena High School (Kasserine)	2020–2021
• Bachelor's Degree in Experimental Sciences - Grade: "Fairly Good"	

EXPERIENCE

Final Project Internship Smart Recruitment Platform	February 2026
Design and development of a smart recruitment platform based on a microservices architecture using Spring Boot, Vue.js, MongoDB Atlas, and Docker. Implementation of NLP services (Llama 3.3, SBERT, TF-IDF, Naive Bayes) for resume analysis and profile matching, as well as interactive dashboards for visualizing data and recruitment performance.	
Summer Internship ONH TRAINING SITE	July 2024
Observation internship at the National Olive Oil Office (Tunis) , focused on creating an internal training website and learning about the company's administrative and IT operations.	
Secretary General	February 2024
Coordinated members and managed activities for the Enactus Enicar club	

ACADEMIC PROJECTS

End-to-End DevOps Project (CI/CD & Kubernetes)	December 2025
Automation of the backend API lifecycle using CI/CD, Docker, Kubernetes, application security (SAST/DAST), and observability.	
Vision-LLM for Explainable Facial Emotion Recognition	December 2025
Using Vision-Language models to recognize and explain composite facial emotions based on annotated images (RAF-CE).	
Interoperable Urban Services Platform Smart City	December 2025
Development of a Smart City platform integrating four web services (REST, SOAP, GraphQL, gRPC) orchestrated via an API Gateway and deployed as microservices to manage mobility, air quality, and urban alerts.	
ShowGoOn	May 2025
Development of a mobile app to browse shows and book tickets online using Android Studio with NoSQL .	
Implementation of GLPI	January 2025
Implementation of an IT asset management system (GLPI) using GLPI, Docker, and MariaDB,	

CERTIFICATIONS

Amazon Web Services (AWS) Badge	
NVIDIA – Fundamentals of Accelerated Data Science, Certificate of Competency	November 2025
	December 2025

SKILLS	Languages	Participations
Technical:	– French: B2	Event Organizer 2024
– Programming languages: Python, C, C++, Java, JavaScript.		Logistical organization and participation in the robotics event at Enicarthage: Enicar Robots 7.0
– Backend: Spring Boot, Node.js, microservices, REST APIs.	– English: B2	Active Member: 2023
– Databases: MySQL, Oracle, MongoDB, MongoDB Atlas		Active member of the CME Enicar club
– Frontend: HTML, CSS, Angular, Vue.js.		
-Artificial Intelligence & NLP: Llama 3.3, Natural Language Processing (NLP), SBERT (Sentence-BERT), TF-IDF, Naive Bayes, Computer Vision, LLM, Prompt Engineering		
-DevOps & Cloud: Docker, Docker Compose, Kubernetes, Git/GitHub
